Your Quantum Prescriptions

How quantum algorithms can drive
innovation in life sciences

Vishal Shete

Managing Director, UK & Global Director of Commercialization
Terra Quantum

An abstract graphic on the left side of the slide, composed of numerous thin, blue, wavy lines that create a sense of depth and movement, resembling a stylized human profile or a complex organic form.

Why are we here?

c.90% of drugs in
the market

only work for 30-50% of the population

7% of all
hospital admissions

Are due to adverse drug reactions

**The current efficacy rate
of standard drug treatments
commands improvements**

Cancer:
25%

Alzheimer's
disease:
30%

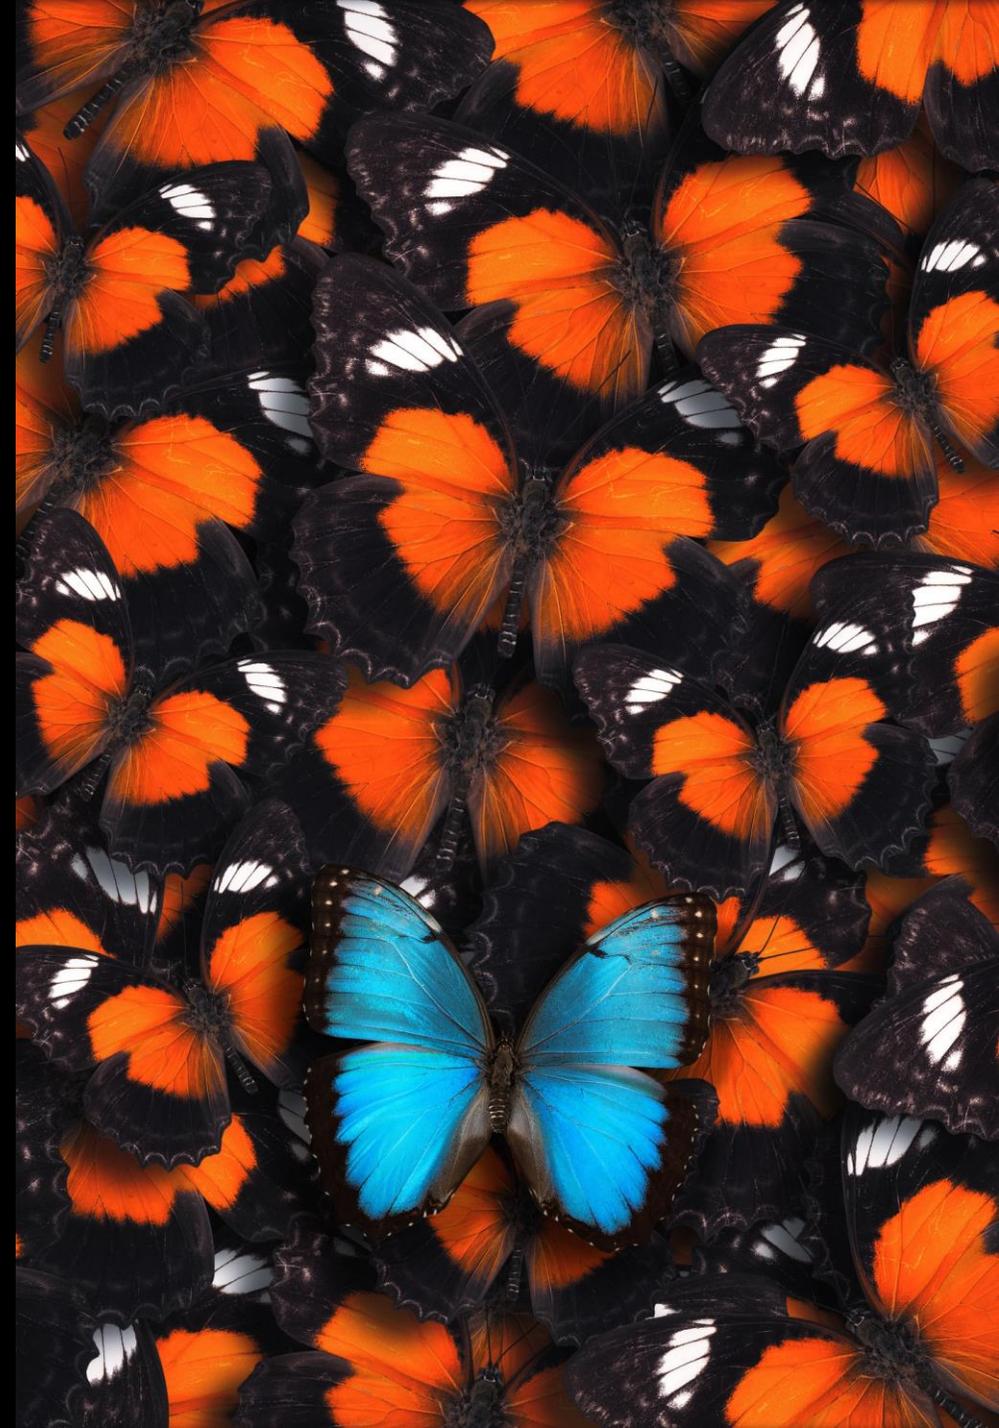

Diabetes:
57%

Source: FDA

We need to focus our
efforts on powering the
paradigm shift in
medical treatments

From “one size fits all”

To personalised medicine.

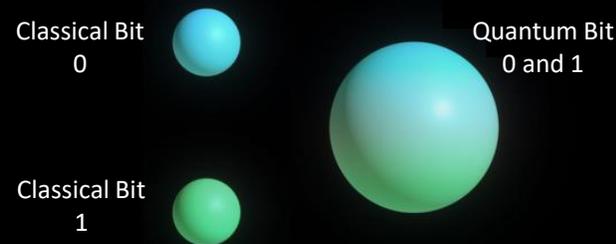

To truly understand each individual, we need to understand them at the deepest level

This journey begins with simulations at the molecular level, followed by interconnected systems, then organs, leading to a truly unique digital representation of the human body.

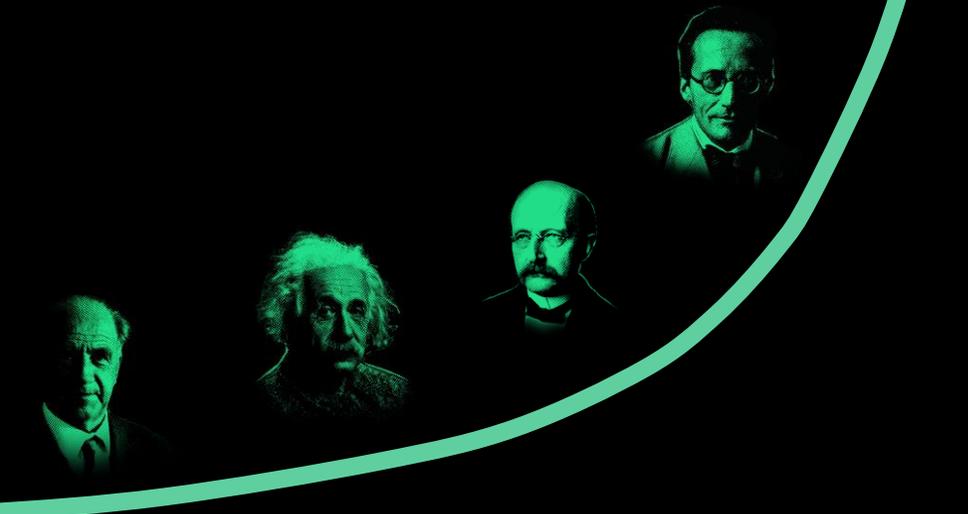

Quantum computing is driven by two key properties which enable exponential scale...

Quantum Superposition

Quantum Entanglement

... breaking the glass ceiling of traditional information processing and tapping into **the power of nature** at the smallest scales.

Hybrid Quantum Computing: Delivering Impact Today and Exponential Improvement in the Future

THE WALL STREET JOURNAL.

GPUs Transformed AI.
Now They're Here For Quantum.

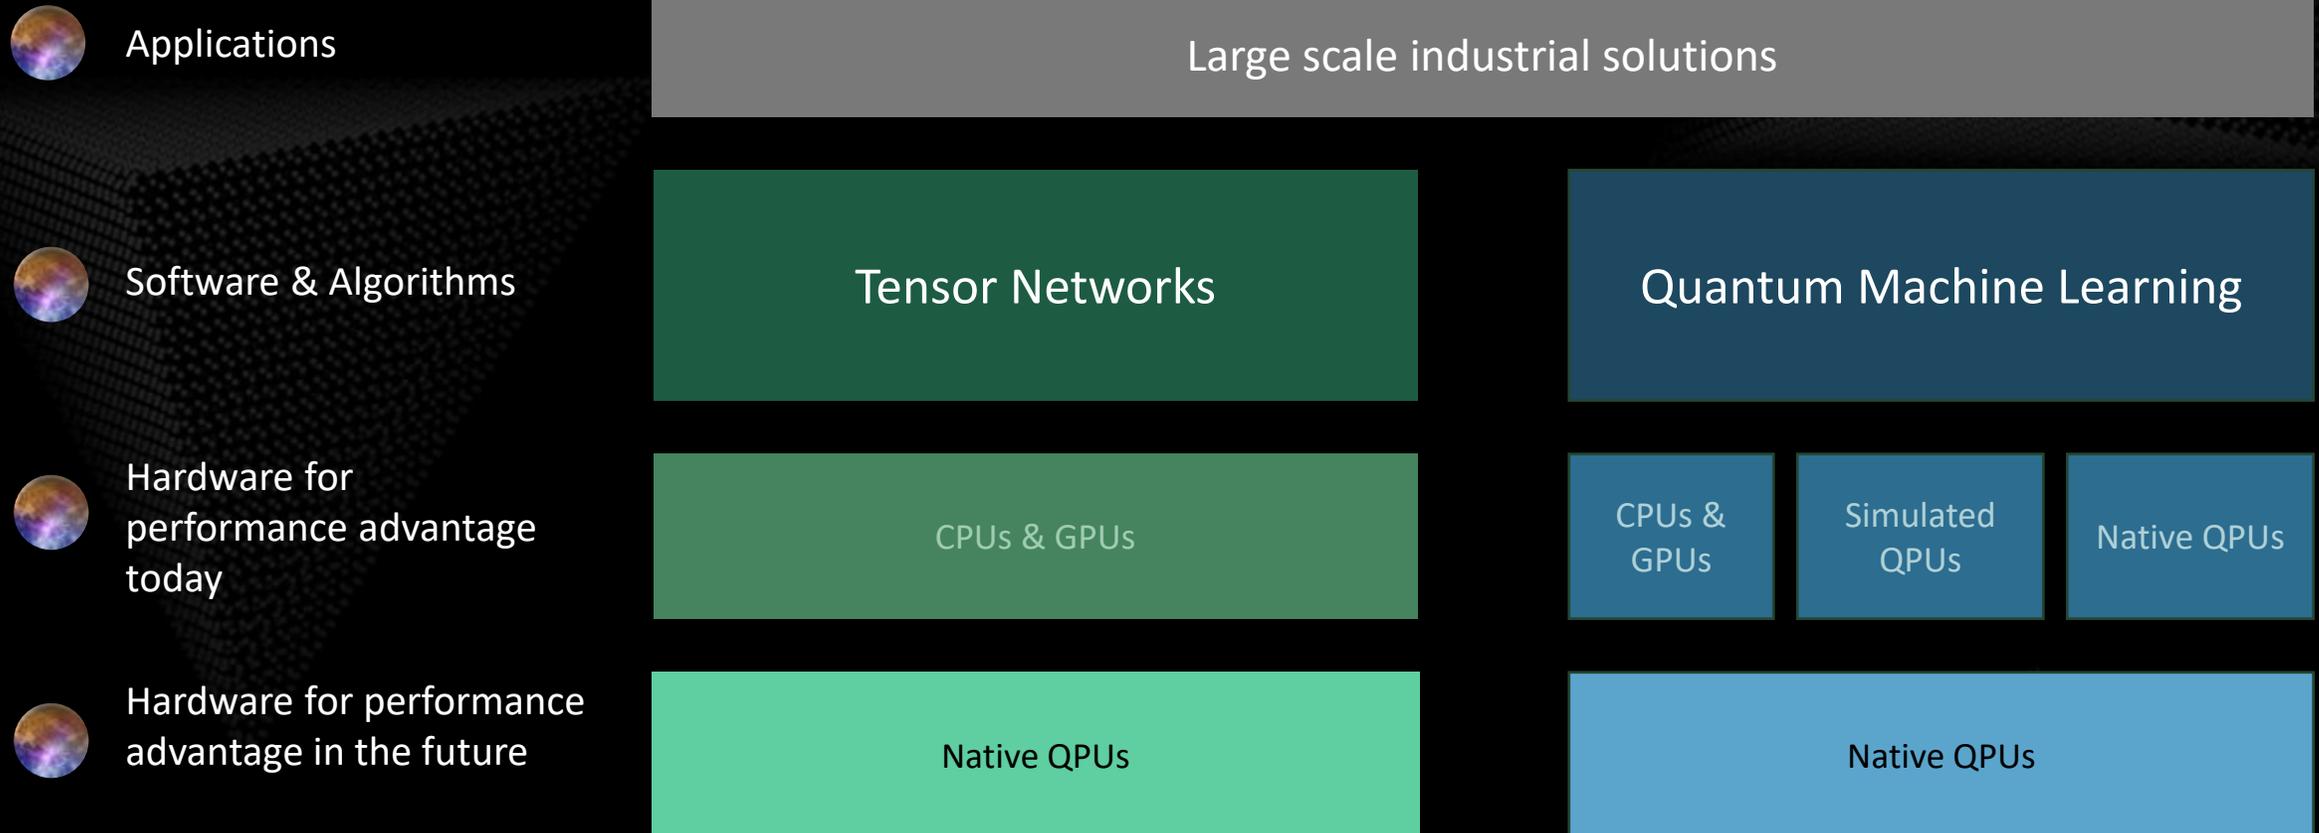

**BEST COMPUTE
PLATFORMS OF
TODAY**

Performance
advantage on CPUs,
GPUs, Simulated
Qubits, etc

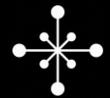

**NATIVE
QUANTUM
COMPUTERS**

Improved
performance on
large scale QPUs of
tomorrow

Leveraging our capabilities in **Tensor Networks & Quantum Machine Learning**

Quantum Software can deliver impactful solutions today

Optimise

>15x

Faster &
more accurate

Augment

~30%

More accurate
with lesser data

Simulate

~200x

Faster

An abstract graphic on the left side of the slide, consisting of numerous thin, concentric, wavy blue lines that create a sense of depth and movement, resembling a stylized wave or a quantum field. The lines are more densely packed in some areas and more sparse in others, creating a gradient of blue tones.

Healthcare Operations

Our work spans various **life sciences & healthcare applications**

Shortening the Path Towards Hyper- targeted Treatments

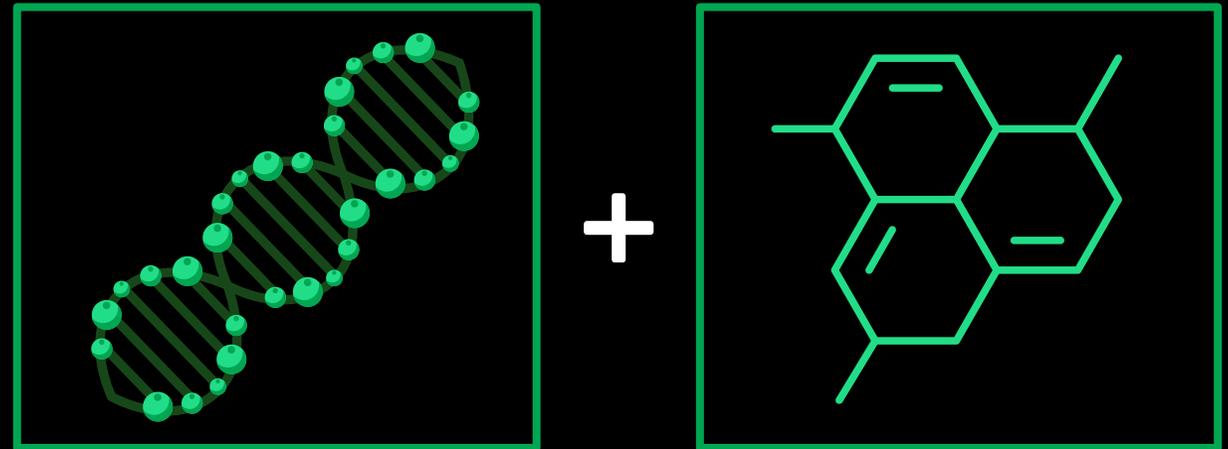

More accurate predictions with
less data

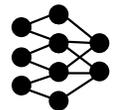

Even when considering a particular type of cancer, there are many subtypes of cancer that exist, expressed in a large range of cell lines.

By understanding the structure of the cancer cell line and of the related drug, we are able to predict their interactions and hence anticipate the drug's effectiveness.

We ran a study of such interactions

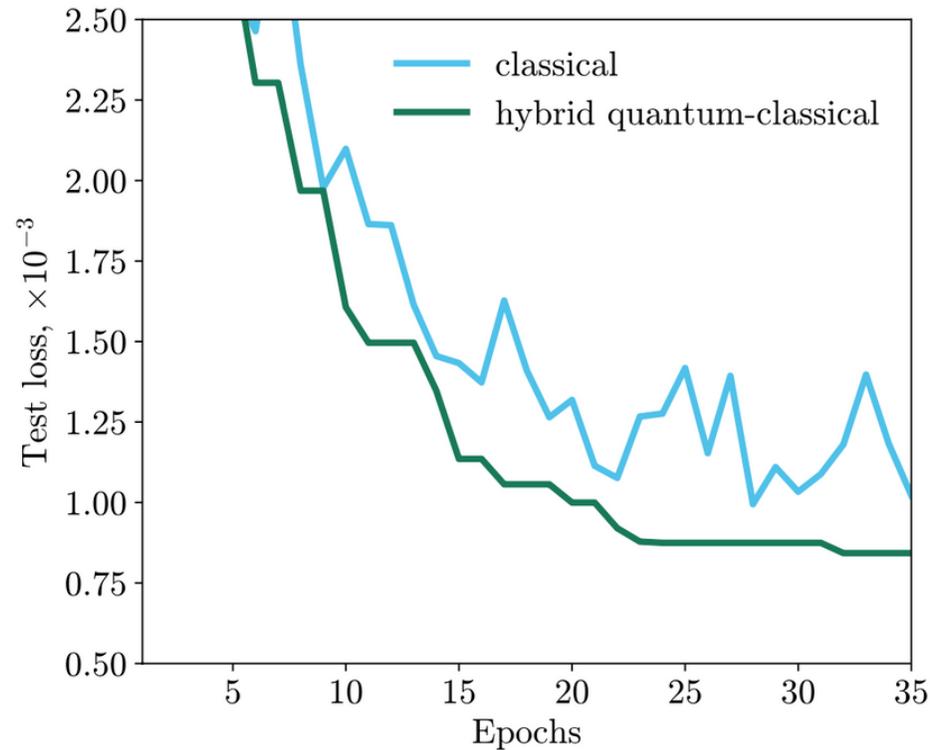

Encoded into a Neural Network of 256 nodes

Quantum Depth-Infused Neural Network with 8 qubits

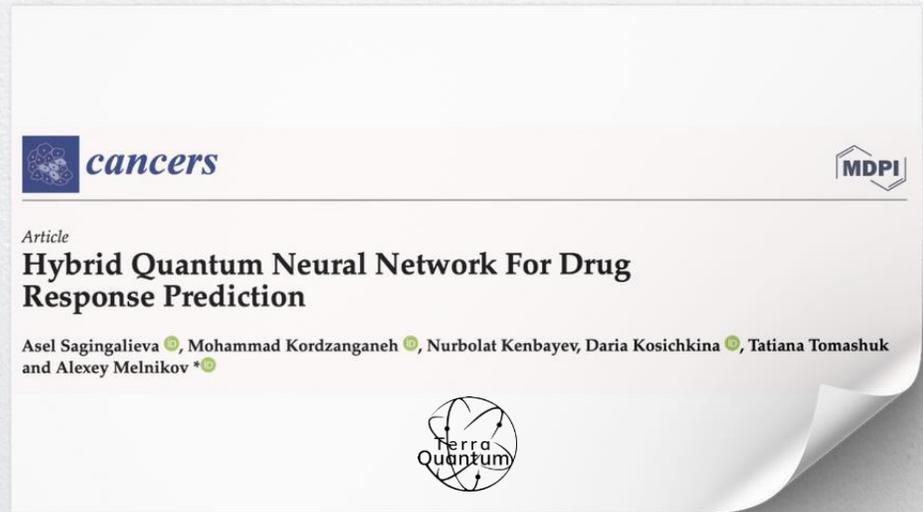

The Terra Quantum quantum-enhanced approach delivered 15% accuracy improvement in predicting the cancer drug response

15%

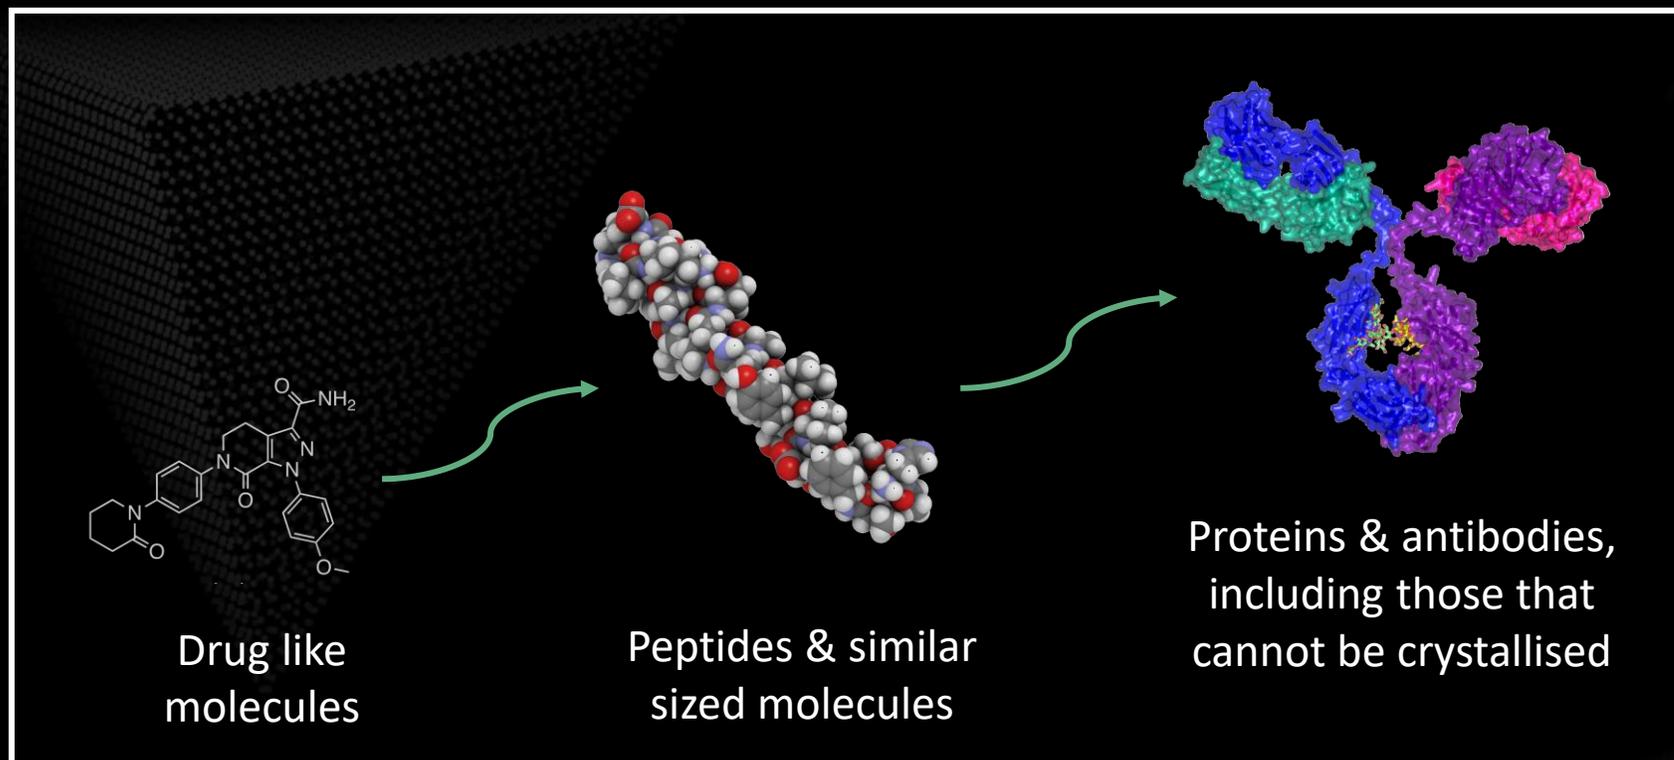

Improved prediction accuracy

The results and detailed methodology are published in the Cancers Journal

Our vision is to create the world's most advanced molecular structure modelling tool that can accelerate drug development

Our pathway for molecular structure modelling

Additional future functionality

Optimisation of antibody sequences

Protein – protein interaction modelling

Broader optimisation of antibodies

Our methods can work with existing molecular structure prediction tools (such as Alphafold) but are not limited to the molecules considered here and can also produce greater levels of accuracy.

Key reasons why our solutions deliver benefits versus alternatives

Better quality solutions: Our methods are highly suited to navigating complex landscapes for optimisation problems and achieve better quality solutions with diversified answers.

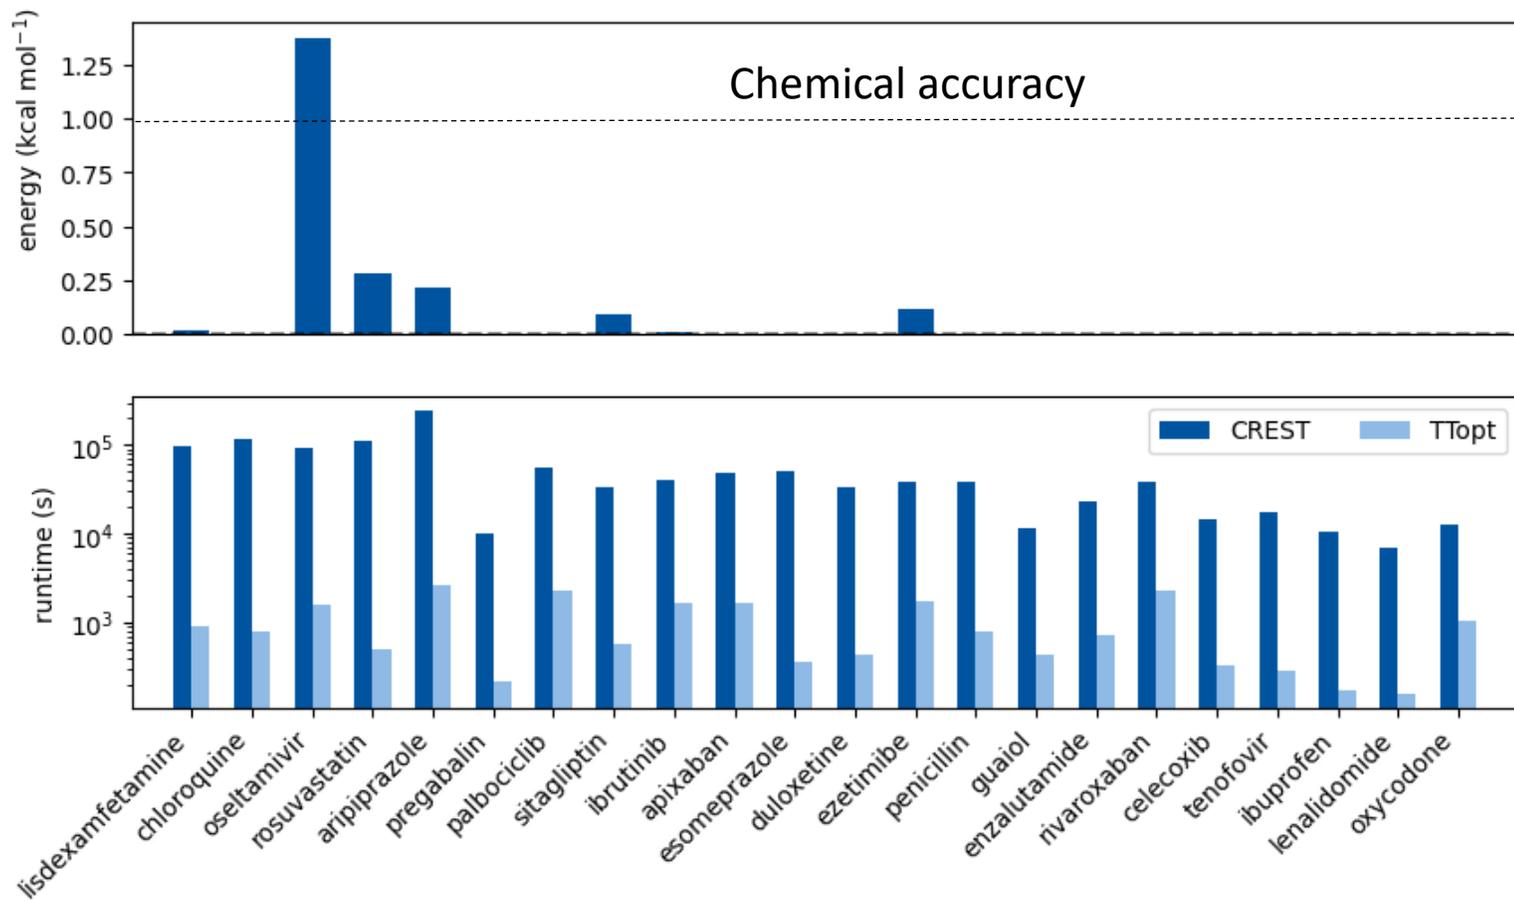

Significant speed up: The improved speed delivered by our solutions allows deployment of methods that were previously computationally too expensive or considered unfeasible.

Greater generalisability: Our solutions do not require training data, unlike many other machine learning / AI based methods. This allows our solutions to be generalised to cases where there is limited training data or of poor quality.

TTConf: Accelerating Conformer Sampling for Druglike Molecules

TTConf vs CREST: comparison of runtimes and energies

TTConf achieves chemical accuracy 10-100x faster than CREST

system specifications

Intel® Core™ i7-11700 @ 2.50 GHz

24 GB | 8 Threads

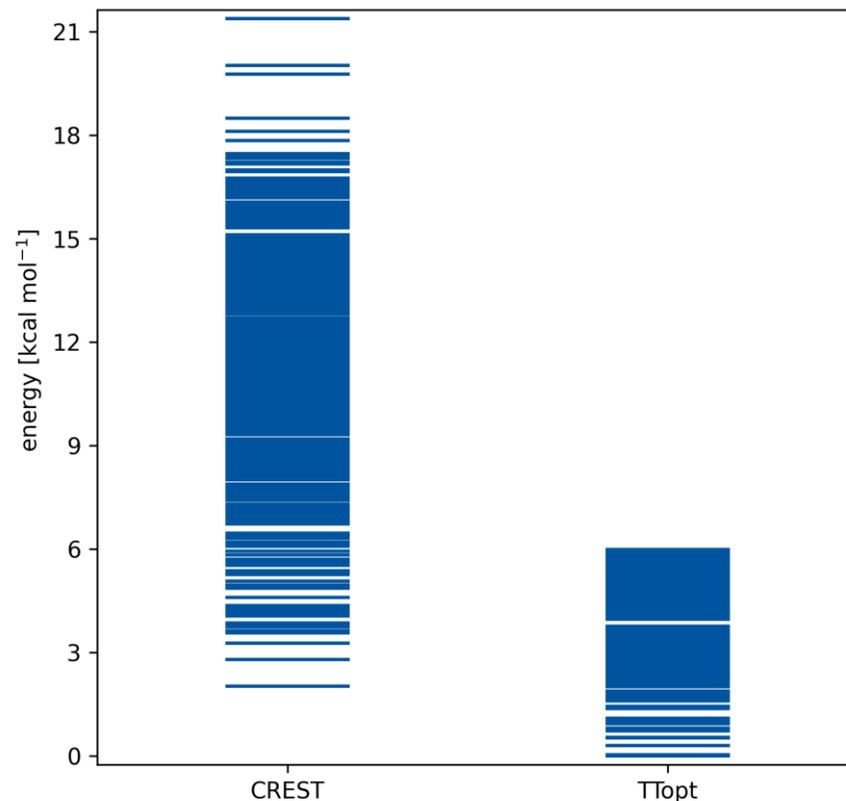

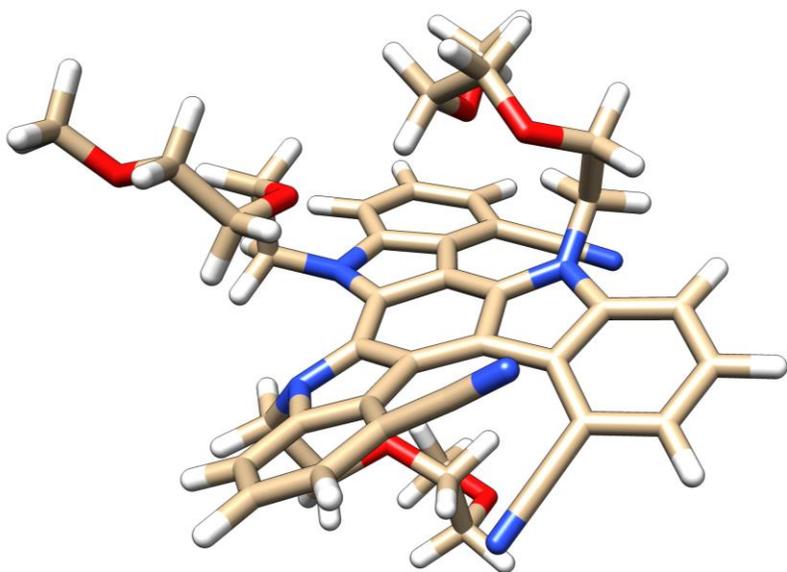

TTConf settings

2 sweeps | rank = 4

grid in degree = [30, 60, ..., 330]

TTConf: Optimizing Flexible Molecules and Beyond

Case Study: Optimizing a nonlinear Catalyst

TTConf achieves chemical accuracy in 2:38 h using 8 threads

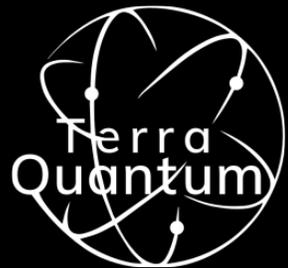

CREST takes 12:30 h using 24 threads

Potential applications:

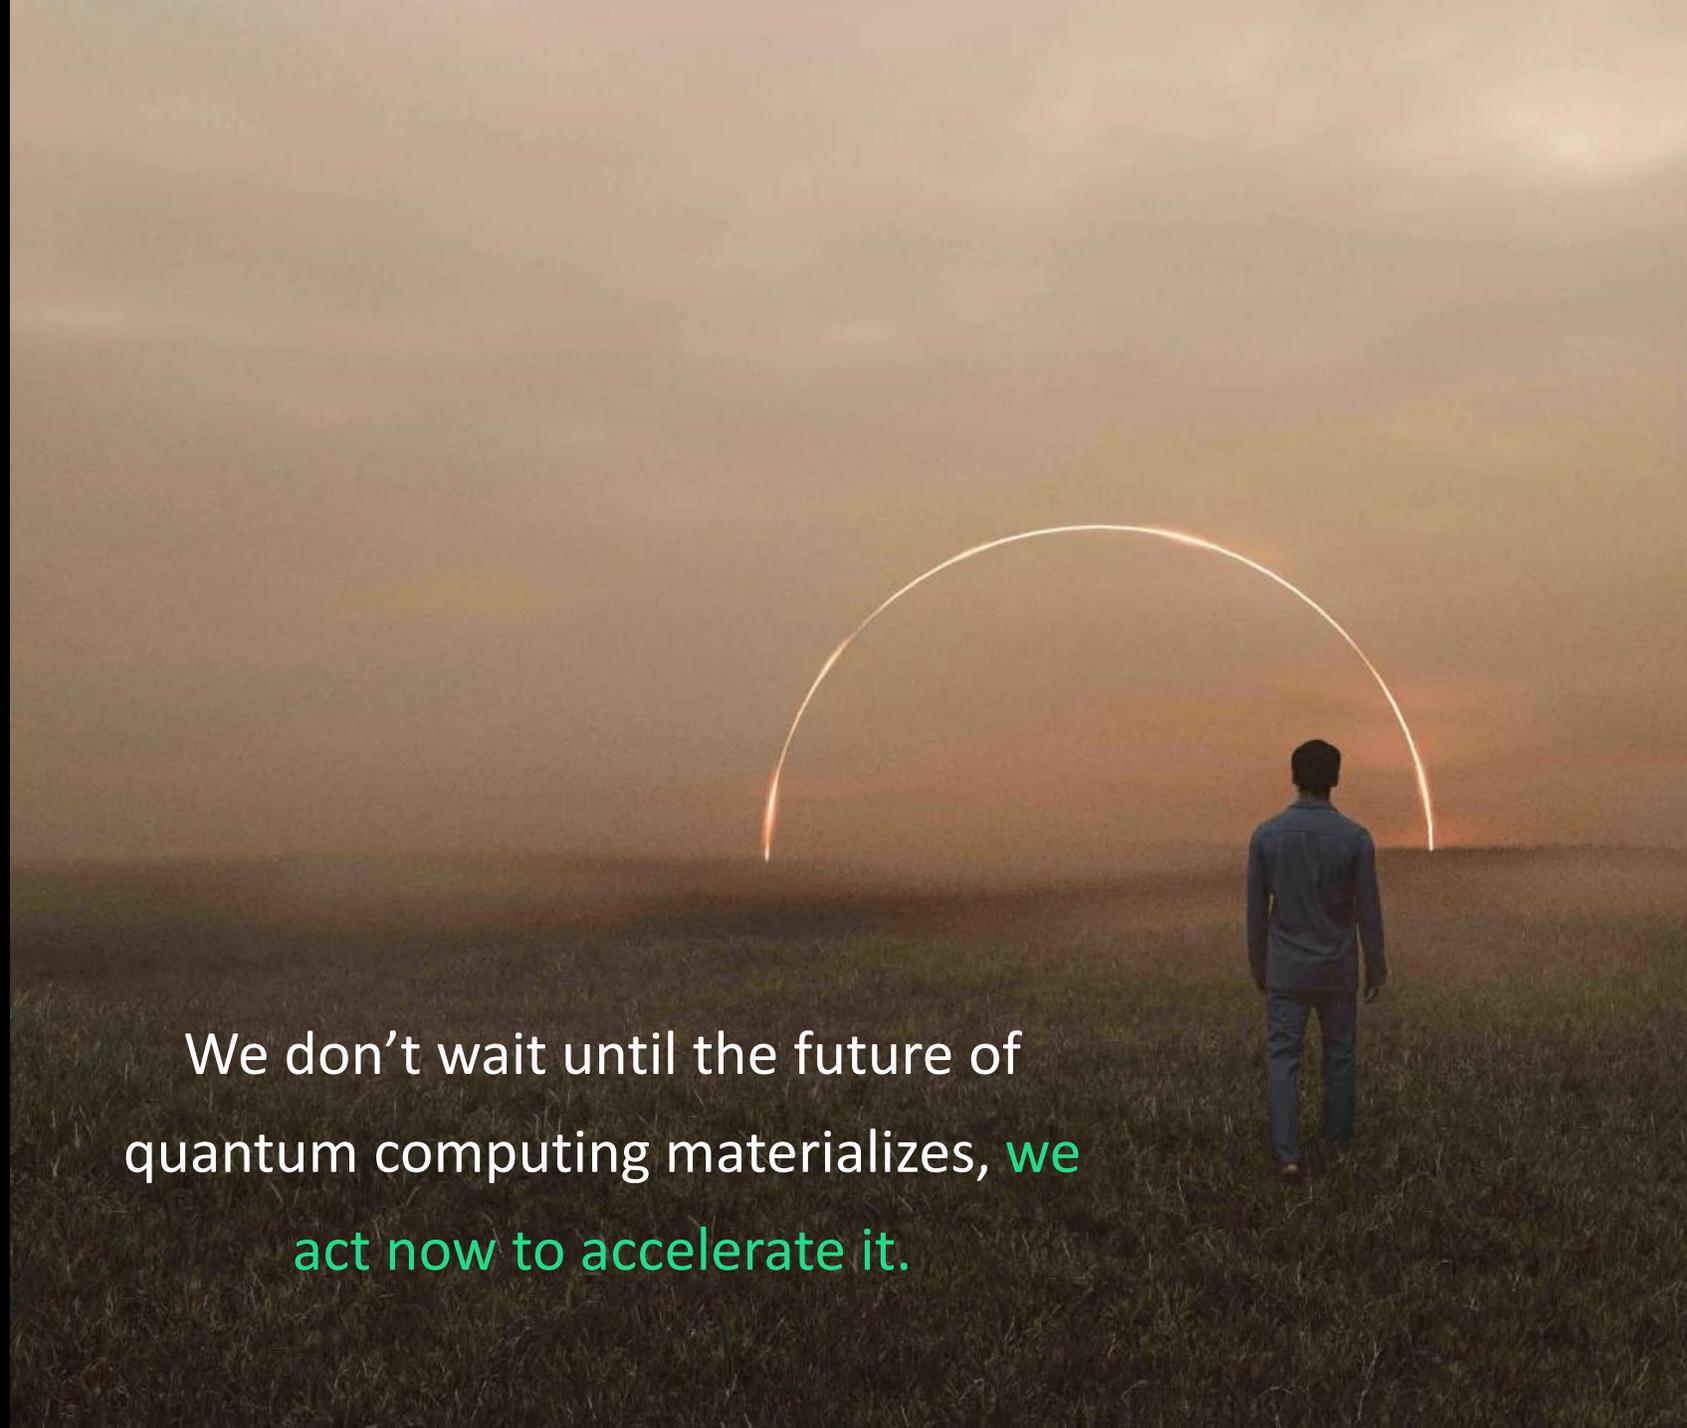

- Screening various databases
- Extension to tree tensor networks

Online-Demo of TTConf available

At Terra Quantum, we recognize the importance of advancing this field and have therefore made the healthcare domain a key part of our focus

We don't wait until the future of quantum computing materializes, **we act now to accelerate it.**
